

October 1, 2013

To Whom It May Concern:

Mr. AJ Meyers is a man with a good idea. His Patriot 500 Racing program promotes K-12 students' use of STEM skills by showing them real life STEM applications in the field of racing. Patriot 500 Racing provides a mobile laboratory where students experience a hands-on presentation of race car technology and performance using STEM skills. Mr. Meyers' goal is to stimulate K-12 students' interest in STEM careers and motivate high STEM achievement using the Patriot 500 Racing programs at their schools and in their communities.

Further, the program promotes patriotism, integrity, leadership and dedication to personal growth by introducing students to veterans with racing backgrounds who use STEM skills daily in their various careers. Together, they focus on those values and principles required for success in college, careers and life.

I believe that your students' lives can be enriched by participation in Mr. Meyers' Patriot 500 Racing program. I ask that you give him the opportunity to describe his program to you and your colleagues, and hope that if you choose to bring him into your schools, your students will benefit with increased STEM achievement, and new career interests. Thank you.

Sincerely,

Larry Morgan, Superintendent

Stark County Educational Service Center
